

2023-2024

NATIONAL ENGINEERING DESIGN COMPETITION Designing for Equity Locally to Affect Sustainability Globally

NATIONAL ENGINEERING DESIGN COMPETITION (NEDC) 2023-2024

Maryland MESA edition

Designing for Equity Locally to Affect Sustainability Globally

Level:Middle School and High SchoolType of Contest:TeamComposition of Team:2-4 students per team (It is strongly encouraged to have four team members.)Number of Entries: One entry per schoolNext Generation Science Standards:

- MS-ETS1-1, MS-ETS1-2, MS-ETS1-3, MS-ETS1-4
- HS-ETS1-1, HS-ETS1-2, HS-ETS1-3, HS-ETS1-4
- **Overview:**

In order to maximize each team's experience during this event, proper execution of all aspects of the judging process and event administration is very important. Although each MESA state may elect to present this event in different format(s), the MESA USA host site and the corresponding National Event Planning Committee will adhere to the information outlined in this document.

MESA USA Code of Sportsmanship:

At all times during the course of this event, MESA students, staff, advisors, and supporting family members should act in a professional and courteous manner. All judges' decisions are final. Staff, advisors, and parents shall not engage judges during the event. Students are responsible for interacting with judges as required.

Introduction

Simply stated, *Designing for Equity* means designing to minimize or eliminate barriers to opportunities for success. Designing for equity in your community allows the opportunity to think globally and act locally.

According to the World Health Organization, equity is the absence of avoidable or remedial differences. Those differences can be defined socially, physically, physiologically, geographically, economically, or demographically. Given the current state, *Designing for Equity in Your Community* has never been more important.

The Creative Reaction Lab, explains that "Equity-Centered Community Design is a unique creative problem solving process based on equity, humility-building, integrating history and healing practices, addressing power dynamics, and co-creating with the community. This design process focuses on a community's culture and needs to create a future with equity for all. ...Through Equity-Centered Community Design, we are building and supporting an emerging movement of equity designers who take on systems with self- and systemic-awareness of oppression, creativity, and action. These designers—students, activists, organizers, educators, government staff, hospital workers, and beyond—seek to disrupt and dismantle these challenges in, and with, their communities: school, city, family, culture, and so on."

In 2015, the United Nations (UN) drafted and adopted 17 goals, known as the Sustainable Development Goals (SDG), as a universal call to action with the ultimate goal of ensuring peace and prosperity worldwide by 2030. The United Nations Development Programme (UNDP) oversees this effort, helping countries achieve the projected timeline. The UNDP explains, "The 17 SDGs are integrated—they recognize that action in one area will affect outcomes in others, and that development must balance social, economic and environmental sustainability." See https://sdgs.un.org/goals for more information and goal breakdowns.

Competition Overview

The theme for the 2023-24 MESA USA National Engineering Design Competition (NEDC) is: *Designing for Equity Locally to Affect Sustainability Globally*.

For this project, student teams will identify an individual or group who experiences some type of inequity (i.e., a user). Teams will employ human-centered design practices to engineer a solution. Teams <u>must use a coding</u> <u>component</u> as the main component of their design. Teams <u>must use the United Nations Sustainable</u> <u>Development Goals (UN-SDGs) in a community-centered</u> capacity for their project. UN-SDG provides a broad view of global efforts to promote equity. Aligning to a goal will guide students in narrowing their focus to help their community. Team should achieve this by selecting a SDG Goal and identifying the SDG Target (i.e., 1.1, 1.2) the project is meant to address.

Each competing team must consist of 2-4 students who are active members of a MD MESA program affiliated with the MESA USA national organization. Solutions and recommendation(s) for next steps will be presented at the MESA USA National Engineering Design Competition. The first-place middle and high school teams from State events will participate in the National Competition. This National Competition event will occur in June 2024 in California.

Competition Components

The components listed below will be used to assess the effective implementation of a human-centered design approach in the context of designing for equity, effective implementation of the engineering design process, and the functionality of the prototype.

High school and middle school teams selected to participate in the National Competition will compete in the four components below:

- 1. **Design Proposal** The objective of the Design Proposal is to provide a brief, non-technical overview of the inspiration for the proposed solution. Students must use the provided Design Proposal Template (see Appendix).
- 2. Academic Poster The objective of the Poster is to provide an overview of the project, highlight key points of the design process, discuss relevant testing and data collection, present the resulting prototype, and share recommendations for further development. Students will prepare a printed academic poster, which will be used during a public poster symposium to provide an overview of the project and the prototype.
- **3. Technical Pitch-** The objective of the Technical Pitch is to allow students to establish their technical knowledge while they provide an overview of their design process and demonstrate their prototype functionality.
- 4. Symposium FOR MARYLAND, this portion is not scored, but completed when your team presents their project at their MESA Day Showcase. The objective of the symposium is to engage an audience in a conversation about the team's design process. Students will share a verbal abstract of their project and discuss their project with the audience using supporting material to emphasize their points in a conference-like setting.

Continuing Projects

MESA USA recognizes that there is both an interest in and benefit for student teams to continue work on a project started in previous years. <u>However, all projects must be new and original.</u> Teams cannot continue working on a project started in previous years.

Plagiarism Policy

Academic honesty and personal integrity are essential to ensure future success as college students and STEM professionals. As such, MESA USA and MD MESA expects that the work presented as a part of the National Engineering Design Competition will be solely the work of the students. If the work or ideas of another are used to further students' work, proper credit must be given to the owner. Failure to do so will result in an act of plagiarism. If it is determined that a student committed plagiarism, they will be disqualified from the competition and they will be ineligible to receive any awards. They may also risk further sanctions from MESA USA and/or MD MESA state organization.

Scoring Summary

Overall ranking will be based on the total score, which is derived by adding the scores for each component. Below is a summary of the point values for each component:

Design Proposal	40 points
Academic Poster	58 points
Technical Pitch	100 points
Total	198 points

Competition Resources

MESA USA has developed resources to support all teams through the development process, from inception to design to implementation. The following links will direct you to these resources.

MEGALIGA	https://nedc.mesausa.org/nedc-overview/
NEDC Website	For Competition Rules, Sample Design Proposal Template, Poster Template
	https://cole2.instructure.com/courses/2040326
MESA USA NEDC Curriculum	Module 1: Setting the Stage Module 2: Intro to NEDC and UN Goals Module 3: Refining the goal and direction Module 4: Develop a Plan Module 5: Experiment and Build Prototype Module 6: Revising/Finalizing Prototype Module 7: Project Deliverables

The guidelines that follow and the scoring rubrics at the end of this document provide detailed information about judging criteria.

<u>Design Proposal</u>

Objective: The Design Proposal provides a non-technical overview of the inspiration for the proposed solution. This short document should help the reader understand why this project is needed and what it is intended to accomplish. The design proposal can be used alone or as support for the other components of the competition.

Format and SUBMISSION:

- 1. Teams <u>must</u> use the Design Proposal Template (see Appendix) and submit as a PDF.
- 2. Make sure the .pdf file is saved with the standard naming convention School name_NEDC_DesignProposal
- 3. Submit the .pdf file as directed by your district **no later than 11:59pm on the specified due date.**

Required Elements (For examples of each element, see a sample design proposal at MESA USA NEDC - Additional Resources):

- <u>Project Title:</u> The title should be creative and descriptive. Readers should get a sense for what the project is about and want to read more. (25 word maximum)
- 2. <u>Inequity Being Addressed</u>: Describe the inequity that you will attempt to address with your proposed solution, and why you chose this inequity. Include information about which U.N. Sustainable Development Goal and target it addresses. (100 word maximum)
- 3. <u>Community Research and User Identification:</u> Explain the process used to identify the inequity and select your user. Include any research done to identify issues in your community and understand which groups face challenges because of these issues.

(200 word maximum)

- 4. <u>User Profile:</u> Provide a detailed description of your selected user. Include information about challenges they face, how those challenges impact their lives, and specific project needs based on user feedback. (200 word maximum)
- <u>Project Goals</u>: List your project goals and explain how these goals will address the inequity. Include any specific design goals. At least 1 project goal and 1 design goal must be included. (200 word maximum)
- Proposed Solution: Describe your proposed solution and explain how it will address your users needs and the inequity they face. (200 word maximum)
- 7. <u>Initial Design Sketch:</u> Include a single (1) graphic of your initial design idea. It should be easy to understand, and key features should be adequately labeled. The reader should have a general understanding of how the prototype might function by looking at the graphic. The graphic must be no larger than 8.5" (h) x 11" (w). The graphic may contain up to four views of the design. Graphics larger or with more views will receive a score of zero.

Academic Poster (electronic)

Objective: The objective of the poster is to provide an overview of the project, highlight key points of the design process, discuss relevant testing and data collection, present the resulting prototype, and share recommendations for further development. Students will showcase their poster at MESA Day.

Format and SUBMISSION:

- 1. Each team must create an electronic poster. All information should be contained on **one single slide**
- 2. Complete an electronic poster. We recommend using PowerPoint.
- 3. Save the poster as a PDF file, using the following format for the file name: School name_NEDC_Poster.
- 4. Submit the file as directed by your district **no later than 11:59 p.m. on the specified due date**.

Required Elements:

All sections should use as few words as possible to adequately present the information. Any section requiring written explanation should be succinct. Generally, it is encouraged to use bullet-pointed lists instead of text in paragraph form.

- 1. <u>Size and Type</u>: Teams <u>must design</u> a single slide electronic poster.
- 2. <u>Title</u>: Posters should include a title at the top. This section could include:
 - a. A take away for people who read the poster.
 - b. An identifier for the project.
- 3. <u>Team Section</u>: Must be present and include the following:
 - a. School name.
 - b. Grade level (Middle School or High School).
 - c. Team members' names. (No more than 4 team members)
 - d. School Coordinator's Name
- 4. <u>Logo</u>: An Official Maryland MESA logo must be included. The logos can be found in classe365 LMS, under "Introduction".
- 5. <u>Problem Statement</u>: This defines the problem to be addressed. This section could include:
 - a. Description of problem(s) addressed by prototype.
 - b. Identify UN Sustainability Goal(s) and target being addressed
 - c. Description of users for whom the prototype is designed.
 - d. Scope of the project and any priorities in design.
- 6. <u>Objective</u>: This defines how the problem is being addressed. This section could include:
 - a. Primary objectives being addressed.
 - b. Any secondary objectives being addressed.
- 7. <u>User Requirements</u>: This section describes the needs of the user and how your prototype meets those needs. This section could include:
 - a. Graphic explaining requirements.
 - b. Bullet point list of requirements.
 - c. <u>High School Teams Only</u>: Address any implicit requirements. For example, if your user wants to live in Alaska the entire year, an implicit requirement is that the design needs to work in below freezing temperatures.

- 8. <u>Prototype</u>: A picture/schematic of the prototype. This section could include:
 - a. Short descriptions of important pieces of the prototype using callouts (short descriptions of key elements on picture)
 - b. Highlights of the device and labeling of main parts.
 - c. Unique elements of prototype.
- 9. <u>Design Process and Iterations</u>: A graphic that shows the team's design process and the number of iterations the team experienced, including specifics. A general Engineering Design Process is NOT allowed. It must be specific to your team's design process. This section could include:
 - a. Flow chart with steps for the team's iterative process.
 - b. Engineering Design Process with specific steps outlined.
 - c. Specific Information about when changes/modifications were made based on testing/user feedback.
- 10. <u>Testing Process</u>: A graphic or list that describes how the team tested the prototypes. This section could include:
 - a. Specific tests used.
 - b. Tests with users.
 - c. User feedback.
- 11. <u>Visual Data 1</u> The data about the potential users. This would include the user's requirements, what the user does and does not want the prototype to accomplish, and what the team chose to address with reasoning. This section could include:
 - a. Table
 - b. Chart
- 12. <u>Visual Data 2</u> The testing data used to drive the prototype development. What tests were done and what were the results? What is the data from those tests? This section could include:
 - a. Chart
 - b. Table
 - c. Graph
- 13. <u>Visual Element</u>: A graphic that describes any other important factors/elements in your prototype. This section could include:
 - a. Decision tree.
 - b. Design matrix.
 - c. Key elements not addressed in other sections.
- 14. <u>Results</u>: The end result of the prototype. This section could include:
 - a. Summary of results.
 - b. How the prototype improves the user's capabilities because of the prototype.
 - c. Changes to the user's experience in the world.
- 15. <u>Conclusions</u>: Description of the final takeaways for the user. This section could include:
 - a. Success and/or failure to meet primary and secondary objectives.
 - b. Next steps for the project.

Technical Pitch (Video Submission)

Objective: The Technical Pitch allows judges the opportunity to determine student knowledge of their project, gain information about the design process used by the students and determine the technical functionality of the prototype.

Students will record an organize, focused, coherent presentation to provide an overview of the development of their design (including research, experimentation, iterations, and conclusions), the technical components of their design, and the functionality of the prototype. The presentation should provide an overview and demonstration of the prototype functionality as well as include an explanation of the mechanical operations, coding, and the integration of hardware and software.

Students can use their choice of support materials, including, but not limited to, an electronic presentation (PowerPoint, etc), prototype, and other relevant materials as support such as their engineering design notebook. Displays and speeches must be the original work of the students.

Required Elements:

The technical pitch is a summary of the technical aspects of the project. Together, they should address:

- 1. Background Information:
 - a. Who is your user and what are your user's needs?
 - b. How does your prototype fulfill the user's needs?
 - c. How does your prototype address the selected UN Sustainable Development Goal and its target?
- 2. Engineering Design Process:
 - a. How did your team use the human-centered design process?
 - b. What problems did you face and how did you solve them?
 - c. What were your major prototype design choices and how were they influenced by the user?
 - d. How did the iterations of the prototype change during the project through testing or evaluation?
- 3. Description of Design:
 - a. How does your prototype function?
 - b. How did you integrate coding into your prototype design?
 - c. What coding elements did you integrate (i.e., loops, conditional statements, etc.)?
 - d. What was your reasoning for selected materials and technology?
- 4. Conclusion and Recommendations:
 - a. What is your final assessment/evaluation of your prototype?
 - b. What are the next steps for the implementation of your prototype?
 - c. Are there any suggestions for improvement and/or redesign?
- 5. Prototype Demonstration:
 - a. Teams must have a working prototype. If not, some areas will not be able to be scored.
 - b. Teams must be able to adequately discuss their prototype design, including unique features of the design, and demonstrate the function of the device.
 - c. Teams should demonstrate the usability of the prototype and how it meets the needs of the user.

Technical Pitch Rules:

- 1. Teams will record a video presentation of no more than 10 minutes and 0 seconds to deliver their Technical Pitch and demonstrate the prototype.
- 2. Teams are to use support material during the technical pitch.
 - a. Teams are strongly encouraged to use support materials such as an electronic presentation (PowerPoint, Prezi, etc.), poster, engineering notebook, code, or other visual aids as needed to supplement their technical pitch.
- 3. SUBMISSION:
- Upload the video to YouTube as an unlisted video.
- Create a document containing the school name, team member names, MESA School Coordinator name(s), and a link to the video on YouTube. Please only list two to four members per team.
- Save the document as a PDF file, using the following format for the file name: School name_NEDC_TechPitch.
- Submit the file as directed by your district no later than 11:59 p.m. on the specified due date.
